I reviewed the paper entitled "The use of tele-education in medicine, during and beyond the COVID-19 pandemic: A commentary". The topic is interesting, but I noted the following issues:

Abstract: the study's purpose should be better specified. Although it is a commentary, methods and results should be clarified for readers.

Manuscript:

- Rationale of the study is not clear.
- Aim of the study is not clear: is it a review?
- Methodology should be revised to consider a review article.
- Results should include more research details.
- Discussion should be improved.
