

# Review of: "Breaking Stereotypes: Sectoral Varicocele Diagnosis Revolutionized by Doppler Ultrasound Advancements"

Deepthy Mary Alex

Potential competing interests: No potential competing interests to declare.

1. **Clarifications regarding number of persons involved in the experiment as the author mentioned that the study involved 200 persons in the abstract section, while in the results section, he showed that only 134 participants were diagnosed with varicocele. The percentages mentioned in the paper are related to 134 or to 200 participants?**
2. Apart from sensitivity and specificity, other parameters could also be used for evaluation.
3. Are there any other techniques to detect varicocele apart from manual palpation? It would be better if you could mention that too in the paper...
