Review of: "Secure and Private Machine Learning: A Survey of Techniques and Applications"

Orhan Korhan[1]

1 Eastern Mediterranean University

The manuscript has bene written to cover a literature review on Privacy-Preserving MachineLearning (PPML). This subject has a huge potential to be revealed and to be discussed. This study, however, has a deficiency in explaining the problem and its significance. The description of the problem is not clear. The literature provided is so narrow that it does not explain the field of the problem existing. The objective of the study is ambiguous, and the gap in the literature is not stated. Moreover, there is no scientific novelty provided in this manuscript.
