Quipazine

National Cancer Institute

Source

National Cancer Institute. *Quipazine*. NCI Thesaurus. Code C61919.

A piperazine-based nonselective serotonin (5-HT) receptor agonist with antidepressant and oxytocic activities. Quipazine targets and binds to serotonin receptors, particularly to the 5HT2A and 5HT3 receptors. Serotonin receptor activation by quipazine may lead to smooth muscle contraction and antidepressant effects.
