Adult familial nephronophthisis-spastic quadriparesia syndrome

INSERM

Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base. Adult familial nephronophthisis-spastic quadriparesia syndrome. ORPHA:2666*

This syndrome, associating familial adult medullary cystic disease with spastic quadriparesis has been described in two cases so far. Renal transplantation was successful in those two patients.
