**Potential competing interests:** No potential competing interests to declare.

Figures are not cited in the text in a correct manner. The study lacks detail objectives and contribution. Thus, the contribution should be vividly clear. There is need to add statistics of number of cases such as the peak number of cases, statistics on vaccine or variants. The contribution of the review should be outlined in the introduction sector. Tables are not cited correctly as well. The reference are not arrange in alphabetical order. Overall, there is need to improve the outlook of the mini review, improve organisation with numbered headings as well as the flow and referencing.
