

Review of: "Machine Learning Methods in Algorithmic Trading: An Experimental Evaluation of Supervised Learning Techniques for Stock Price"

Konstantin Kuzmin

Potential competing interests: No potential competing interests to declare.

1. It is worth revealing in more detail what data set was used, outlining the time frame of the dataset and its characteristics
2. If possible, more about network hyperparameters
3. Describe in more detail the economic part of the scientific work and describe the financial instruments whose data the authors use
