This paper addresses an important issue in clinical oncology. The aim of this study was to provide a comprehensive review of "The tumour microenvironment in BRCA1/BRCA2 hereditary breast cancer and the role of epigenetics in its regulation" to provide a better understanding of the greater aggressiveness and poor prognosis of this pathology.

The author clearly presents the basis for the greater aggressiveness of hereditary breast cancer, including a detailed analysis of the effect on tumor microenvironment, stressing the relevance on immune cells. The case for the epigenetic role in the modification of related mechanisms is also clearly presented.

In summary this paper is clear, well written with sound scientific basis and of potential interest in clinical application.
