X-linked endothelial corneal dystrophy

INSERM

Source

INSERM. (1999). Orphanet: an online rare disease and orphan drug data base. X-linked endothelial corneal dystrophy. ORPHA:293621

X-linked endothelial corneal dystrophy (XECD) is a rare subtype of posterior corneal dystrophy (see this term) characterized by congenital ground glass corneal clouding or a diffuse corneal haze, and blurred vision in male patients.
