Potential competing interests: No potential competing interests to declare.

1. Authors have presented experimental results on plastic-treated sand; hence, the title may be revised.
2. Sec.3 results and discussion, Fig. 6, cited twice with no point to make, so it can be deleted.
3. Fig. 6 x-axis and legends need clarity in presentation; 7dcs or 7 days?
4. Flexural test: The description of Fig. 8, also Fig. 9 in the text, is not in sync. The x-axis numbers and decimals need better clarity.
5. Fig. 10: The last formulation needs to be adjusted properly. Also, comment on the Fig. 10 results.
6. 2nd paragraph in conclusions: Compressive strength after how many days?
7. Mention the basis for 22.1KN, 40KN, and 49KN, how you arrived at.
