

Review of: "Prevalence of Buruli Ulcer Among Residents in Jasikan Municipality: A Cross-Sectional Study"

Alebachew Amsalu

Potential competing interests: No potential competing interests to declare.

The title is interesting regarding the epidemiology of diseases, but it looks like a report, not research. At least it would have been better to investigate factors.

- The study site should be focused and relevant to the title.
- The methods section is not clear and repeatable.
- The authors conducted a census so that the sample size determination was appropriate.
- The total population (denominator) is not mentioned. Prevalence estimation formula??????
- Data collection tools must include standard case definitions and an observation checklist.
- Generally, the method was poor.
