

# Review of: "An insight into the possible benefits of cupping therapy in COVID-19"

Zhizhierjing@163.Com Keke

**Potential competing interests:** The author(s) declared that no potential competing interests exist.

The author tries to demonstrate the effect of cupping on COVID-19, from auxiliary examination to related symptoms and possible intervention mechanisms. It is interesting and meaningful, but there are some problems:

1. The mechanism of cupping intervention needs to be completed and classified and the analysis of the main possible intervention targets should be said.
2. The background introduction of cupping, the selection of action parts, the selection time, etc. which may be leading to any difference in the effect.
3. Do you have any relevant research on when COVID-19 works and how to use it better? You can try to give opinions.
4. You can consider adding relevant charts, such as mechanism target classification, improving symptom classification with corresponding data, and even relevant image results pictures, etc.
