**Potential competing interests:** No potential competing interests to declare.

The abstract is written clearly and comprehensively.

The introduction is well-written but could be more concise to maintain focus on the main issue. There is a lot of extraneous content in the introduction.

The materials and methods section is written in thorough and detailed terms.

The results of this study have not been compared with those of other studies. It would be more engaging for the reader if the results were compared with other studies.

The interpretation of results and discussion should be more well-written.
