Potential competing interests: No potential competing interests to declare.

The topic of the paper is relevant.

The elements of the paper are good.

The research methodology is clear.

Some concerns about Grit that was included as one of the variables. Nevertheless, the authors explained why they included Grit in their research, it is obvious that this variable doesn't correlate with creativity development as far as there are studies that explain that in many cases people create in emerged situations. So, from this point of view, the results could be more valuable if instead of Grit authors use such variables as Imagination, Critical thinking, Enthusiasm, or Flexibility of mind.

In general, the topic of creativity development is relevant, and it is important to know about creativity development in India.
