Potential competing interests: No potential competing interests to declare.

This paper presents the development of a prototype IoT system for detecting gas leakage and noise pollution. It is an acceptable undergraduate project, but not suitable as a research paper. A research paper requires one or more contributions. For example, perhaps a new technique is used, which is different from techniques used in existing products. Or perhaps an experiment is conducted to show the effectiveness of the system in a real hospital environment. Simply reporting how the prototype is developed is normally not sufficient for a research paper.
