

Review of: "Ternary instantaneous noise-based logic"

Mercy Nesa Rani

Potential competing interests: No potential competing interests to declare.

The title of the article looks catchy, but the concept has to be explained properly to justify the title of the article. I would like to mention some of the points to be incorporated.

1. The advantages of ternary logic over binary logic have to be given elaboratively that is missing here.
2. The equation No: 6 has to formatted correctly.
3. The references should not be incorporated in the conclusion section.
4. Review of literature section has to be incorporated.
5. The abstract should include what specific work is addressed in this paper. Here it is written in general that has to be corrected.
