Idiopathic isolated micropenis

INSERM

Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base. Idiopathic isolated micropenis. ORPHA:95707*

A rare, non-syndromic, urogenital tract malformation characterized by an anatomically normal penis which has a stretched penile length of less than 2.5 SD for age, in the absence of any other abnormalities and with no known cause.
