Potential competing interests: No potential competing interests to declare.

The research article entitled "Building a Foods Data Automation Platform Using Cloud Computing Type PaaS" introduces the concept of digitalization in food production and its impact on national stability and resilience.

However, there are some shortcomings that need to be improved in a better way.

- The paper provides a comprehensive overview of cloud computing and PaaS in the context of food information management.
- The abstract is not written well. A massive re-write is required to highlight the problem statement with the proposed solution.
- Most of the figures and tables are not cited in the paper.
