Potential competing interests: No potential competing interests to declare.

The manuscript addresses the general aspects that define the current dynamics of the Konjac agricultural economic system.

Important considerations:

- a) In this type of descriptive work, it is important to consider a broader data matrix that allows for the development of consistent graphs to explain the situation through indices; for this, radial graphs are suggested.
- b) Although there is a reference that could justify the use of 37 interviewees for the work, in practical experience it is essential to handle updated data from agricultural censuses that allow the correct definition of the sample size. I consider that this is very small when one wants to characterize an emerging agroecosystem.
- c) It is important to pay attention to the way of citing. Likewise, use references of high methodological quality.
- d) In the summary, the results are discussed in a very subtle way without the relevance that it represents.
