INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base. Ichthyosis-alopecia-eclabion-ectropion-intellectual disability syndrome. ORPHA:2269*

Ichthyosis-alopecia-eclabion-ectropion-intellectual disability syndrome is an ectodermal dysplasia syndrome characterized by severe generalized lamellar ichthyosis at birth with alopecia, eclabium, ectropion and intellectual disability. Although similar to Sjögren-Larsson syndrome, this syndrome lacks the presence of neurologic or macular changes. There have been no further descriptions in the literature since 1987.
