Potential competing interests: No potential competing interests to declare.

In general, there are a few comments that need to be reviewed:

- It is written very short as a review article, especially the introduction section. The literary structure of introduction should be revised based on new published papers. They should emphasize in "Introduction" that what is the original, novelty or unique ideas behind this research?
- The method of copper nanoparticles synthesis and its characteristics should be added.
- What is the mechanism of action of nanoparticles in the treatment of skin disease?
- It seems necessary to add figures and tables. Details of the meta-analysis should also be added.
