

# Review of: "Influence of Motivation on Pre-service Primary Teachers' Performance in Mathematics"

Arturo Basbas

**Potential competing interests:** No potential competing interests to declare.

The study is well presented and beneficial to aspiring teachers to be more motivated in our noble profession. However, for the improvement of the manuscript, I have listed some recommendations:

1. Abstract: I would suggest removing the statistical figures/results. It was already mentioned in the results and discussion though.
2. On the SOP, it would be better to remove some unnecessary statements before the main statement. Go directly to the main questions.
3. Include a graph of the respondents' specific answers on the "Motivation in Learning Mathematics Questionnaire" and the data collection process.
4. Recommendations should be based on the findings.
