Dear Authors, the paper is concise and succinct, providing a general overview of dental infections and antibiotic resistance. I believe the chosen title for this review is very suggestive and was selected thoughtfully. The incorrect use of antibiotics by patients with dental pain can also contribute to antibiotic resistance and side effects. In my opinion, you should have expanded the methods section, specifying more details about how you conducted the research and what databases you included in your review. I think definitions and methods could be described more comprehensively. The reference list is quite small for a review, and the content of your article is not sufficient for a review, so you should conduct more research and bring more studies and evidence to our attention. You should be able to better highlight this topic, its importance, and its impact on global health.
