This is an interesting paper addressing an important question.

Most of my comments relate to the discussion:

1. Please include a strengths and limitations section.
2. Please included an implications for practice section.
3. Please discuss recommendations for future research.
4. Please be more explicit about the novel information we have gained from your study.

Other more minor comments:

1. Please state the gap in the literature in your abstract.
2. Please explain what you mean by 'applied' to the healthcare Centre in your abstract and methods sections
