Potential competing interests: No potential competing interests to declare.

Thank you for inviting me as reviewer. This manuscript gives an interesting idea on study the intersection of green spaces and physical exercise, particularly to examine the roles of neighbourhood diversity and single status. However, it needs some improvements.

Abstract: The abstract is clear and easy to understand. However, the author should pay attention to grammar. For instance, in the methods paragraph, "this study investigate the associations of geographical features of green spaces with.....", should it be investigated?

Introduction: The introduction part can be more logical, or some paragraphs seems parts of literature review. Here I strongly the authors add some terminologies and definitions to make it clearer.

Literature review: All the hypotheses should be based on reasonable and clear literature review. Can rewrite the first paragraph of literature review to make your hypotheses more convincing.

Method: Here I have huge doubt on data source. It shows the data was collected from From 25 September 2011 to10 October 2011. Is that you type the wrong date or seriously the date was generated in 2011?

Discussion: Just like I have mentioned above, the determination of LGS should be explained when it appeared at the first time.

Conclusion: The conclusion need be improved. It should highlight your result on the associations of geographical features of green spaces and green physical exercise.
