Potential competing interests: No potential competing interests to declare.

The review addresses a much-needed topic: a cure for viral skin infections. But it is written casually and needs to be written with a discussion on the role of copper nanoparticles in the treatment of viral infections, mode of action, scope of activity against which viruses, data on toxicity of copper nanoparticles, skin irritation, duration of therapy, etc. The references should be recent, and the review should bring out all aspects of nanoparticle therapy, mode of application, etc.
