Potential competing interests: No potential competing interests to declare.

In fact, climate governance research is already very systematic and there's abundant research of low-carbon environmental governance. This paper needs to clarify the differences, boundaries and main contributions between this paper and other related research, especially in the structure of low-carbon environmental governance. From the perspective of the indicator system, the uncertainty of the policy environment pays more attention to traditional environmental policies (except focusing on low-carbon governance), and also the innovation environment. The relationships of these indicators with low-carbon governance is debatable, which is also concerned with the definition of low-carbon environmental governance system in this paper. Otherwise, there's also a lack of a review of current uncertainty assessment methods, the analysis of the advantages and disadvantages of the methods used in this study, etc.
