Potential competing interests: No potential competing interests to declare.

I read a dedicated time to the manuscript entitled **Analyzing the Effects of Organic Amendments on Soil Erosion Dynamics: A Comprehensive Study on Application Methods and Timing**". The findings are significant, particularly for providing a possibility to help in exploring the utilization of organic amendments in improving soil erosion conditions. Overall, this manuscript is well written. The subject to that: Further recent researches on subjected examined should also be included in relevant sections. The materials used in the study were found clearly described in the manuscript. The statistical analyses should be revised to include standard error. Results were found appropriate and given in a logical order. The data presented in the form of Figures and Tables with satisfactory discussion in the related section. I recommend major revisions of this paper in the journal subject to minor amendments.

1. Introduction should be improved by adding latest references
2. Briefly discuss the entire section of materials and methods to be compatible with journal requirements.
