Dear Editor,

I appreciate the authors for the paper focusing on its research objectives, methodology, and key findings. As a reviewer, I felt the need for clarification on certain matters.

1. In the results and discussion, the authors titled section 3.1 as UV-Vis activity of NPS, but the content is the methodology of antibacterial activity.
2. Results and discussion of UV-Vis activity are missing
3. The methodology of FESEM analysis was not included in the article.
4. Significant antibacterial activity was not found; there is no zone of inhibition. If there is an explanation that satisfies the query described above, it can be published.
