

Review of: "Meropenem Usage Assessment amid the Antibiotic Resistance Crisis: A Comprehensive Analysis in a Tertiary Care Hospital in Pakistan"

Mallika Sengupta

Potential competing interests: No potential competing interests to declare.

1. The sample size is small.
2. The sampling method is not described.
3. Why the magic number of 100 samples?
4. Exclusion criteria should include whether other carbapenems, like imipenem, were included.
5. No reference is given for SPSS.
6. This is not a cohort study. In the results, the term "cohort" is used. It should be changed.
7. Meropenem prescription was the inclusion criteria. In the results, it is mentioned that it was prescribed in all cases.
This is very obvious.
8. The methodology for Figure 3 is not mentioned.
9. What the final diagnosis and culture sensitivity report for meropenem were is not mentioned.
10. The objective and the conclusion of the study are not clear.
