Review article

In this paper, the authors investigated the prevalence of dyslipidemia and metabolic syndrome among Nigerian adolescents. Indeed, the aim of this current study is very interesting regarding the scarcity of data on African populations.

My comments are as follow :

The keywords should be put it directly after the abstract (page 1)

The abbreviations should be in the text (page 3)

Paragraph 6 in page 4 : The overall prevalence in this cohort study (instead of this study cohort)

Paragraph 6 in page 4 put In Overal, 46,1%... (instead of in all)

Try to summarize the data provided on all the tables

In the last reference (52) there is no informations about the publication (date, journal name and number of publication)

Finally, I suggest that the authors should add a paragraph to highlight the limitations of this study.

The manuscript should be reviewed regarding the language grammer and presentation in order to improve the quality of this article.
