Dear Editor,

The article entitled "Excessive Aluminum in Soil: Review Paper" is interesting; however, I have some observations to improve the review.

- 1.- There are very old quotations (more than 30 years old). I suggest updating the quotations.
- 2.- In each of the sections, the citations are very few. It is necessary to justify with more citations; it is supposed to be a review.
- 3.- Review the citations. Are they right?
- 4- Figures 1 and 2 are not mentioned in the text.
- 5.- Remediation strategies: make a table of at least 10 articles showing the most used techniques to remediate soils contaminated with aluminum.
- 6.- There are very few citations. A review is an exhaustive research on a topic; this review is very short.
