Dear Authors,

While the work attempts to tackle a real-life scenario, the current content of the research article may not meet the requirements for journal publication.

The literature review should adopt a more critical approach and consider incorporating a comparative table to highlight the distinguishing features of the proposed work in contrast to existing systems.

The methodology is deficient in providing a comprehensive explanation. The design of the WSN node should include justification for selecting specific components, rather than merely assembling them.

Consider adding a separate section dedicated to discussing the results and validation of the proposed system. Additionally, it would be beneficial to include a comparative analysis with commercially implemented existing systems.

The images spanning from Fig. 15 to Fig. 20 lack clarity.

This work appears to resemble more of a project report rather than a journal paper.

I recommend resubmitting the work after making the necessary upgrades and improvements.
