Some important notes that I can provide for improvement

- (1) Abstract meets the requirements.
- (2) There is no explanation about the population in determining the sample size.
- (3) The explanation in the respondent's profile is sufficient.
- (4) In the discussion section, there is something interesting that should sharpen the discussion. You have to answer why the direct influence of PU --> INT is greater than SI --> INT and POEU --> INT? This condition should be confirmed by looking for the answer in the field.
