Small Intestinal Monomorphic Epitheliotropic T-Cell Lymphoma

National Cancer Institute

Source

National Cancer Institute. *Small Intestinal Monomorphic Epitheliotropic T-Cell Lymphoma*. NCI Thesaurus. Code C150504.

A monomorphic epitheliotropic intestinal T-cell lymphoma arising from the small intestine. It is characterized by the presence of a monomorphic cellular infiltrate of small to medium-sized T-lymphocytes that are cytotoxic and express CD56. It is not associated with celiac disease.
