Microsomal Triglyceride Transfer Protein Large Subunit

National Cancer Institute

Source

National Cancer Institute. *Microsomal Triglyceride Transfer Protein Large Subunit*. NCI Thesaurus. Code C116416.

Microsomal triglyceride transfer protein large subunit (894 aa, ~99 kDa) is encoded by the human MTTP gene. This protein plays a role in the targeting of triglycerides, cholesteryl esters, and phospholipids to membranes or vesicles.
