

# Review of: "Cooling Beer With a Wet Paper Towel"

Yi Li

Potential competing interests: No potential competing interests to declare.

The investigation of this manuscript is both intriguing and pragmatic. However, there are a few suggestions that I hope the author will take into consideration. Firstly, it would be beneficial to include information regarding the moisture content of the wet wipes utilized in this study, as well as their evaporation rate after being moistened. This is crucial since the rate of evaporation can significantly impact the influence of wet wipes on beer temperature. Additionally, it is essential to address whether or not wrapping the beer bottle with a wet paper towel ensures a snug fit without any gaps. Any potential gaps between the wet paper towel and beer bottle could potentially affect the conclusions drawn from this study. By incorporating these aspects, I believe that this captivating study has great potential for publication.
