

# Review of: "Monkeypox among linked heterosexual casual partners in Bayelsa, Nigeria"

Nischal Shrestha

**Potential competing interests:** The author(s) declared that no potential competing interests exist.

1. Its better not to put abbreviations in abstract.
2. Keywords should be in alphabetical order and should match according to <https://meshb-prev.nlm.nih.gov/>
3. Is this a cross sectional study ? then prevalence should be mentioned in the result.
4. Most of the Journals format support Introduction part less than 100 words in case study. Its better to include only specific details (( What is this (topic of research)? ,Rationale for study ,Objective of the study )) in introduction part and put other details in discussion part.
