Review of: "Information Technology for Detecting Fakes and Propaganda Based on Machine Learning and Sentiment Analysis"

Edgar González Fernández[1]

1 Universidad Complutense de Madrid

the document describes in a very superficial way the techniques and tools that could be used to combat the dissemination of fakes and propaganda. However, I do not see references to relevant projects, previous work, or databases available for addressing the problem.

Additionally, a a dataset and a a tool are mentioned in the work, but no a basic description of this dataset is given. Whta is the source of this information? Did it required of a cleaning or transformation process? How many texts have been processed? A

lso, no information or sources about the toll (TextBlob) is given.

In this sense, the experimentation does not allow to reproduce or even interpret the results presented in section 4.4.
