Title: Finding the illuminance levels for walkers in a prominent public park in New Delhi during the post-twilight period for healthy visual comfort, security, and other related parameters

Author: Dr. Raja Singh

In this manuscript, the authors have reported the illuminance level during the post-twilight darkness on the walking path of a famous public park in New Delhi. The result can be useful for security, comfort and preventing light pollution. In recent form, the result of the paper is too specific. If this result can be extended to apply in other parks or public areas, it will take more impact.
