

# Review of: "Analyzing the Science of Apple Juice: Insights Into Production, Preservation, and Health Effects"

Zhaojun Ban

**Potential competing interests:** No potential competing interests to declare.

Apple juice was focused on in this review, including production, preservation, and benefits. Throughout the article, it is not very comprehensive and deep, like a textbook. The authors should improve the quality and reorganize the structure. The details are as follows,

1. Abstract: It can be reduced and reorganized.
2. Introduction: It lacks logic. Only 3 paragraphs were introduced; however, they were told separately without any connection.
3. Section 2: The title is about juice, but the contents are related to apple fruit. Why is Table 2 here?

"Support weight loss": Here, snack foods were mentioned.

Concentrated juice should be included in this article.

4. Visual inspection,

The advanced technology should be introduced in the current situation, such as AI.

The processing technology should be given with modern techniques.

5. Methods of preserving,

What is the difference between a hot water bath and pasteurization?

6. The language should be improved.
