Potential competing interests: No potential competing interests to declare.

The research is relevant to the current global context. Lately, the study used the concept of business model resilience in the context of the machine tool industry for a particular company, ABC. The study analyses the threats of emerging technologies on this company's business model. The researchers have presented all relevant information in an organized manner. The flow of the write-up is quite commendable. However, a few areas need a bit more work or clarifications to improve the overall quality of the My suggestions are as follows:

Comments:

- A. The introduction section lacks critical debate. Authors must initiate the section with a brief view of the global condition of the machine tool industry and then gradually narrow down the scenario towards ABC company.
- B. The authors should extract the literature from recent studies and also mention sources for every literature backup for the study. However, very few references are mentioned in the content to back up the literature.
- C. For the originality of this manuscript, little more significant information from the latest publications will enhance the justification of publication especially in section 2. The author must find out other potential uncertainties for ABC company and their impact on the business model of the company.
