Potential competing interests: No potential competing interests to declare.

In my opinion, the research on the policy preferences of farmers is valuable and interesting. And I think more research on this topic should be encouraged. However, I have some severe concerns on this manuscript.

More figures and tables can be used in the data analysis of the research, so as to present the data and research problems more intuitively.

What are some key future directions that could be outlined in discussion? please make sure to highlight in the discussion section the novel findings from your work, and how it contributes to the existing literature.

The writing requires some proofreading to more clearly convey the points that the author(s) would like to raise.
