In relation to the article "Short Communication Measles: 1963-2023, Immunology of a Morbillivirus" I would like to make the following comments:

I think it is an excellent, updated review that addresses the most relevant immunology aspects of measles viruses.

The contribution to the scientific community will be very important since it will allow us to clearly understand the participation of immunological aspects in the physiopathogenesis of measles virus infection.

The document does not require any modification.

I consider it accepted.
