

Review of: "Skin related health issues among health care workers due to utilizing of personal protective equipment during COVID-19 pandemic in Pakistan"

Dr Nadia Noreen

Potential competing interests: The author(s) declared that no potential competing interests exist.

The manuscript covers an important topic but lacks overall structure and cohesiveness. The grammatical and punctuation errors are present throughout the manuscript. Abstract has few mistakes that I have highlighted in pdf version. Methods need to be precise with details on eligibility criteria of the participants. Results need to be rewritten with clear-cut description of tables. Discussion needs to be beefed up with comparison if any similar studies conducted. These changes will make manuscript suitable for publication.
