

Review of: "Determinants of Micro, Small and Medium Enterprises (MSMEs) Sustainable Development in Africa"

Rose Adetunji¹

¹ University of South Africa

Potential competing interests: No potential competing interests to declare.

The H1 sentence need to be reconstructed.

The topic covering the whole of Africa is too broad. It is better for the topic to choose either one or two countries in Africa.

More recent literature review is necessary for readers to have understanding of MSMEs in Africa.

The details of how data was collected from 54 African countries was not stated. Readers need to know the strategies used to collect data in 54 countries. Is the questionnaire shared online to the MSMEs or which approach was used.

The authors mentioned that the result of the research has been sent to policymakers in Ethiopia, I do not understand why this has to be sent to Ethiopia alone among all the countries in Africa.

Kindly provide limitations to the study and future recommendations.
