

# Review of: "Influences of Crop Geometry and Nitrogen Application on Growth, Yield, Fodder Value, and Quality of Baby Corn: A Review"

Muhammad Saqib<sup>1</sup>

<sup>1</sup> Ayub Agriculture Research Institute

Potential competing interests: No potential competing interests to declare.

The author has tried to review an important topic. However, rigorous revision is required before it can be accepted for publication.

Some revisions are suggested below.

## General Revisions:

1. There are too many mistakes in grammar and tense.
2. Inappropriate sentence structure and incomplete sentences in many places make it hard to understand what is being said.
3. Read the whole draft thoroughly and be patient in rephrasing it with a clear understanding of what you want to say.

## Technical Submissions:

1. You need not give too many details of the origin, uses, and history of baby corn.
2. There exists a very delicate relationship between the cropping geometry and nitrogen. You need to discuss more about this interaction.
3. Likewise, the interactive influence of cropping geometry and nitrogen has not been discussed anywhere in the abstract.
4. The conclusion needs to be more "logical" and "summarized" than generalized.

## Overall Submission:

Dear Author,

Reviews are always helpful for researchers and aspirants. You have tried to review an important topic. A little more effort

and focus can make it valuable for readers. I have highlighted some mistakes (not all) in the manuscript for the ease of your understanding.

Wish you all the best.
