

Review of: "[Review Article] Melatonin, ATP, and Cataracts: The Two Faces of Crystallin Phase Separation"

Muhammad Abu Bakr Siddique

Potential competing interests: No potential competing interests to declare.

This is an interesting review of the potential role and use of melatonin in cataracts. The information given is useful. I believe this information will open a cheap and alternate option, and melatonin can be used in the routine treatment of cataracts.

I recommend that this manuscript be accepted and published.

Best regards,

Muhammad Abu Bakr Siddique
