IKBKG wt Allele

National Cancer Institute

Source

National Cancer Institute. *IKBKG wt Allele*. NCI Thesaurus. Code C75608.

Human IKBKG wild-type allele is located in the vicinity of Xq28 and is approximately 25 kb in length. This allele, which encodes NF-kappa-B essential modulator protein, is involved in the modulation of signaling. Mutations in the gene are associated with incontinentia pigmenti and several immunodeficiency diseases.
