The study is good and innovative. Overall, the writing is good. However, there are some suggestions for improvement:

1. Please write the aim consistently. Should have only 1 aim for the study. It seems the author has 3 aims in the introduction.
2. Please provide more explanation of the physical components of residential apartment design and relate them to the green element and positive mental health.
3. Please state the sample calculation used in this study, such as Raosoft, Gpower, or etc.
